

# Healthy London Partnership

There has never been a better time to create a healthier future for London. Imagine a city where everyone takes responsibility for their own health and wellbeing, while helping those less able, so we can all live longer, healthier lives. This is a future where every Londoner lives a fitter, healthier, happier life; where there is clean air, smoke free parks and where everybody can enjoy a more active life while creating a healthier future for London's children.

Healthy London Partnership is a collaboration between London's 32 clinical commissioning groups and NHS England London to tackle the capital's unique healthcare challenges and empower Londoners to make healthier choices. We think by working together we can make London the world's healthiest city by 2020.

**This is a snapshot of recent achievements and work underway as part of Healthy London Partnership.**

## PROGRAMME PROGRESS

### Cancer

We have just completed two projects that focus on improving care for people living with and beyond cancer. The holistic cancer care review looked at cancer as a long term condition; a proposed new model of care for London has now been published and is now available online. The Croydon primary-care-led prostate cancer follow-up service had been a joint pilot between the Transforming Cancer Services Team and NHS Croydon CCG (with funding from Prostate Cancer UK). It is based on NICE guidance. An evaluation of the pilot is now available. It includes a commissioning pack and tools for implementation. Both projects have emphasised that personalised, holistic cancer care is achievable. The prostate follow-up pathway has shown a 57 per cent saving for commissioners.

### Children and young people

In response to feedback from London's children and young people that NHS information is too hard to understand and services impossible to navigate, we have been developing a mobile and website application specifically designed for them. It will help children and young people get information about health services and empower them to make informed decisions about their health and health related issues. From January to March, we asked people aged 13 to 24 to tell us what was important about their health to help decide on our approach. Over 400 people took part in surveys and focus groups. The technical development is now underway with the app available on iOS and Android phones and devices from May.

## PROGRAMME PROGRESS

## Estates

We have commissioned 217 utilisation studies, 908 condition surveys and around 70 feasibility studies in respect of the primary care estate, all to support the development and delivery of local estates strategies. We transferred the London Estates Database that covers all NHS London estate, and includes provider estate data, onto an on-line database (SHAPE) that has a special mapping functionality. We also helped progress integrated estates planning as part of sustainability transformation plans by facilitating engagement between CCGs and providers.

## Digital

Three major London digital suppliers (EMIS, Cerner and Intersystems) have been brought on board to develop a proof of concept for our proposed approach for sharing clinical information throughout London's NHS. Our approach focuses on agreeing standards that will enable clinical information to be exchanged while avoiding the need to create large central databases. These suppliers will be considering whether our plan to overcome London's digital challenges is achievable, so it can be put into practice.

## PROGRAMME PROGRESS

### Mental health

We commissioned NHS Benchmarking Network to develop a suite of executive dashboards to support London commissioners and providers in understanding pressures on the mental health system. The dashboards will help CCGs with ongoing capacity and demand modelling for mental health care.

Our early intervention in psychosis programme has been working to prepare the system for the 1 April 2016 go-live date for the early intervention in psychosis access and waiting time standard.

## CRISIS CARE

### **A combined mental health and urgent and emergency care project**

We held London's first Crisis Care Summit in February. Delegates from across London's Crisis Care System came together to share learning, best practice and discuss common challenges. There were updates from the national and London crisis care programmes; workshops showcasing best practice models; poster presentations of innovation occurring across London and the UK; and ways to increase collaboration and joint working between key players in the crisis care system.

## PROGRAMME PROGRESS

### Personalisation and participation

The self-care case for change is continuing to develop. Work has been undertaken to strengthen economic modelling for the interventions that are included. This has involved collating CCG-level data on the number of personal health budgets required to meet national targets, evidence of what the £584m self-care efficiency aspiration means for London and the amount attributed to digitally-enabled self-service healthcare. Details will be available soon to CCGs and strategic planning groups so that robust plans for self-care can be included in sustainability and transformation plans.

### Prevention

We have been supporting CCGs with their sustainability and transformation plans, including fortnightly webinars for commissioners; an STP briefing pack, and financial modelling data packs. We published a diagnostic review of childhood obesity in three London neighbourhoods and chaired roundtable debates with experts on obesity.

We held a partners event promoting and encouraging participation in the London workplace health charter. The HealthWorks pilot completed last month and its tools are now available. We also helped the Royal Free become a vanguard for social movement for health in the workplace.

## PROGRAMME PROGRESS

### Primary care

We have been holding workshops for strategic planning groups to put together a learning programme for primary care federations and networks. The year-long programme will see London's GP leaders develop the skills they need to ensure the capital's primary care is fit for the future.

We have also been supporting CCGs with their sustainability and transformation plans by providing London-wide content and dedicated support.

### Urgent and emergency care

We have been working with London's CCGs to help develop the urgent and emergency care (UEC) element of sustainability and transformation plans. UEC facilities designation guidance has been further developed to include legal advice on the London Quality Standards.

The 111 team has introduced a live cloud-based solution (Patient Relationship Manager system) that gives clinical staff access to records so they make quicker, more appropriate decisions. It also shares care information with other UEC partners. It is being formally evaluated for its health economic, patient and U&EC system benefits, with an interim report is expected in July 2016.

## PROGRAMME PROGRESS

## Workforce

The London Strategic Workforce Framework was published in March 2016. It sets out the eight focus areas where workforce action can transform health and social care in the London. We developed it in collaboration with Health Education England, the Association of Directors of Adult Social Services and NHS Improvement. Over 130 people representing our partners across London took part in a deliberative event on 23 March to launch the framework and discuss its implementation. The framework, plus case studies and additional resources are now available online.

## HEALTHY LONDON PARTNERSHIP KEY CONTACTS

Please get in touch with questions, feedback or suggestions by emailing [england.healthylondon@nhs.net](mailto:england.healthylondon@nhs.net). Alternatively if you are interested in a particular programme or area please see contact details below.
