

“Your next trip to the toilet could save your life. If you’re sent a free NHS bowel cancer screening kit, you should complete it as soon as possible.”

Dr Sas, Colorectal Surgeon

The NHS bowel cancer screening kit can save your life.

You do it privately at home by following a few simple steps. Just a tiny sample detects signs of cancer before you notice anything wrong and most people get the all clear.

If you’re sent a kit, put it by the toilet. Don’t put it off.
